Lab Assignment 2

Name of Project:

Shopping Storm

Group Members:

- Abdul Majid (FA19-BSE-014)
- Nabeel Amer (FA19-BSE-042)
- Moiz Rasheed (FA19-BSE-064)

Description:

In this project, we will be design and create an online shopping system whose name is **Shopping Storm**. In this We will be covering various domains (clothes, tech products). This site has two type of views one is admin view and other is user view. Admin and users have their own username and passwords to login. Only admin can add , delete, and modify product information. User must be register as a buyer to place order online. When user will register himself at this time, we will be saving information like name, password, age, gender, favorite color, etc. The user can select an item he wants to purchase, it will be placed in the cart then he can pay through credit card, master card, jazzcash and easypaisa.

User can do many other things in this website like

- User can search product by name.
- User can filter products categories, price, and many other bases.
- User can rate product after buying product.

Technologies and Tools:

Front-end:

- HTML5
- CSS3
- JavaScript

Back-end:

- PHP

Database and Query language:

- SQL

Server:

- GitHub
